

OPEN ENROLLMENT CAPACITY FY23

Open Enrollment capacity determinations were made by projecting student enrollment and comparing with projected planning staffing levels. Calculations were done without ELD considerations. The table shows capacity categories by school by grade level as they stand prior the choice registration period.

Excess capacity determinations will be used for approving Open Enrollment applications. The categories listed reflect the anticipated number of students each school can accept in each grade level under Open Enrollment.

As real enrollment numbers are known and throughout the school year, administration can accept nonresident students through variances, as space permits.
